Atlante Illustrato Delluniverso Ediz Illustrata

L'Atlante illustrato dell'Universo racchiude tutte queste scoperte e conoscenze umane. Si comincia con lo studio del nostro pianeta, la Terra, e del suo satellite naturale, la Luna. Poi, capitolo per capitolo, vengono focalizzate aree sempre più vaste del cosmo sino ad arrivare alle 88 costellazioni, alle nebulose e alle galassie.

Provides facts about the solar system, space exploration, and the creation of the universe, and answers such questions as "Are we alone in the universe?"

Thematic displays of the solar system, origins of earth and the endangered world; statistical spreads covering food production, world health, population, and other questions; detailed maps showing the latest geographical and political changes and a glossary and world index for place location.

A comprehensive guide to all the stars and celestial objects visible with the use of binoculars or an average-sized telescope, this fully revised edition features updated and extended text, improved sky charts, and new diagrams and photographs.

The third book in Theodore Gray's bestselling Elements Trilogy, Reactions continues the journey through the world of chemistry that began with his two previous bestselling books The Elements and Molecules. With The Elements, Gray gave us a never-before-seen, mesmerizing photographic view of the 118 elements in the periodic table. In Molecules, he showed us how the elements combine to form the content that makes up our universe. With Reactions Gray once again puts his one-of-a-kind photography and storytelling ability to work demonstrating how molecules interact in ways that are essential to our very existence. The book begins with a brief recap of elements and molecules and then goes on to explain important concepts that characterize a chemical reaction, including Energy, Entropy, and Time. It is then organized by type of reaction including chapters such as "Fantastic Reactions and Where to Find Them," "On the Origin of Light and Color," "The Boring Chapter," in which we learn about reactions such as paint drying, grass growing, and water boiling, and "The Need for Speed," including topics such as weather, ignition, and fire.

The mass of available data about World War II has never been as large as it is now, yet it has become increasingly complicated to interpret it in a meaningful way. Packed with cleverly designed graphics, charts and diagrams, World War II: Infographics offers a new approach by telling the story of the conflict visually. Encompassing the conflict from its roots to its aftermath, more than 50 themes are treated in great detail, ranging from the rise of the Far Right in pre-war Europe and mass mobilization, to evolving military tactics and technology and the financial and human cost of the conflict. Throughout, the shifting balance of power between the Axis and the Allies and the global nature of the war and its devastation are made strikingly clear.

With more than 300,000 copies sold worldwide in 15 languages, this newly revised and updated edition of 1001 Paintings You Must See Before You Die brings you right up to date with an incisive look at the world's best paintings. From Ancient Egyptian wall paintings to contemporary Western canvases, this book is truly comprehensive in scope and beautiful to leaf through. Within its pages you will see displayed 1001 of the most memorable, haunting, powerful, important, controversial and visually arresting paintings that have ever been created. More than 400 twentieth- and twenty-first-century paintings are reproduced in these pages, including new works from contemporary galleries. Entertaining and informative text written by an international team of artists, curators, art critics and art collectors illuminates both the paintings and the people who painted them. An insightful review accompanies a beautiful reproduction of every painting - an enviable art collection to dip into whenever you please. The

book is organized chronologically, so you will discover fascinating and surprising juxtapositions as well as pleasing similarities as you turn the sumptuous pages. The paintings are also listed by artist and by title, making it easy to find a specific painting or trace the development of one painter's work. Accompany Professor Stephen Farthing on his personal guided tour of the paintings everyone should strive to see in a lifetime. Many are easily accessible - either in well-known galleries, such as the Louvre in Paris or MoMA in New York, or in smaller, more intimate collections across the far reaches of the globe. Every one of them is worth planning to see.

Patrick Moore's painstakingly researched, beautifully illustrated guide to astronomical observation for casual and serious observers.
