Ground Water Contamination: Transport and Remediation (2nd ...

Description. This text addresses the scientific and engineering aspects of subsurface contaminant transport, analysis, and modeling as well as remediation in ground water. It offers a modern engineering approach to ground water contamination problems of the nineties and beyond.

Ground Water Contamination: Transport and Remediation, 2nd ...

Contaminant transport and fate in ground water. A key objective of the USGS Toxic Substances Hydrology (Toxics) Program is to understand the physical, chemical, and biological processes that control contaminant transport in ground water. Many Toxics Program scientists participate in multidisciplinary investigations of the reactive and non-reactive transport of contaminants in ground water.

Topics: Ground-Water Contaminant Transport

This book devotes the first three chapters to a concise review of basic concepts of groundwater hydrology. The transition to contaminate transport is made through a broadly based discussion of courses of contamination and data collection - hydrology to transport to reactions to microbiological reactions. Chapters on reactive transport and bioremediation follow and the final chapter is a practical discussion of the legal aspects of ground water contamination.

Written for environmental scientists, engineers and others involved in the valuation and remediation of ground water, this book presents methods for dealing with the four major ground water issues facing us today: flow and contaminant transport processes, flow and transport modeling, field investigation methods, and ground water remediation.

Ground water contamination: Transport and remediation ...

This book deals with flow and contaminant transport processes, field investigation methods, flow and transport modelling, and groundwater remediation. It consists of 14 chapters: introduction to groundwater; groundwater hydrology; groundwater flow and well mechanics; sources and types of groundwater contamination; data collection methods; contaminant transport mechanisms; sorption and other...

groundwater. Once a chemical enters the groundwater regime, several transport mechanisms are present that may aid in the spreading of the contamination. These mechanisms include diffusion, advection, mechanical dispersion, and hydrodynamic dispersion. Diffusion is the process by which a contaminant in water will move from an area of

5.0 CONTAMINANT FATE AND TRANSPORT

Groundwater Pollution (also called groundwater contamination) occurs when pollutants are released to the ground and make their way down into groundwater. This type of water pollution can also occur naturally due to the presence of a minor and unwanted constituent, contaminant or impurity in the groundwater, in which case it is more likely referred to as contamination rather than pollution.

Intended for hydrogeologists, engineers, and college students in those or related fields, this updated edition discusses the theory and practice of ground water contamination ...

Ground Water Contamination: Transport and Remediation ...

The fate of subsurface contamination depends on the local geology, groundwater flow patterns, pore-scale processes, and molecular-scale processes. Contamination might spread rapidly within a high-conductivity sand lens, or it might diffuse at a snail's pace through a low-conductivity clay.

Ground Water Contamination: Transport and Remediation

CONTAMINATION Contamination of ground water can result in poor drinking water quality, loss of water supply, degraded surface water systems, high cleanup costs, high costs for alternative water supplies, and/or potential health problems. The consequences of contaminated ground water or degraded surface water are often serious.

Ground Water Contamination G - US EPA

The notion that groundwater pollution initiates as transport in the unsaturated zone, and the fact that common vadose zone methodologies have only limited ability to provide real-time alerts for pollution processes should push the research community to issue a clarion call to develop monitoring technologies for the unsaturated zone. Such ...

Ground Water Contamination: Transport and Remediation, 2nd ...

Pollution of surface water can cause degradation of ground-water quality and conversely pollution of ground water can degrade surface water. Thus, effective land and water management requires a clear understanding of the linkages between ground water and surface water as it applies to any given hydrologic setting.
